

# Weekly Coal Production

Production for Week Ended:  
January 6, 1990

## Preface

The *Weekly Coal Production (WCP)* provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. The Coal Exports and Imports Supplement contains annual as well as detailed monthly data on U.S. coal and coke exports and imports. This week's supplement contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price).

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as

specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution Report*, the *Quarterly Coal Report*, *Coal Production 1988*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).*

## Summary

U.S. coal production in the week ended January 6, 1990, as estimated by the Energy Information Administration, totaled 17 million short tons. This was 39 percent more than production in the previous week, which included the Christmas Day holiday, and 4 percent higher than the comparable week in 1989. Production East of the Mississippi River totaled 10 million short tons, a 69 percent increase over the previous week, reflecting the decision by some mine operators to exercise the four-day floating holiday option contained in the United Mine Workers of America contract. Production West of the Mississippi River totaled 7 million short tons, a 12 percent increase over the previous week.

Coal consumption at electric utility plants in October 1989 totaled 61 million short tons. For the first 10

months of 1989, utility coal consumption amounted to 632 million short tons, virtually the same as in the comparable period of 1988.

Utility coal stocks on October 31, 1989, totaled 142 million short tons. This was 7 million short tons more than at the end of September, and is typical of the electric utility industry's pattern to stock pile additional coal for the winter months.

Receipts of utility coal declined to 65 million short tons in September 1989 from 70 million short tons in August. In the first 9 months of 1989, receipts totaled 560 million short tons as compared with 539 million short tons in the comparable period of 1988.
